

# WESAM OSAMA SOULAIMAN

IT ENGINEER | FULL-STACK DEVELOPER

## CAREER OBJECTIVE

Information Technology Engineering graduate seeking an IT Engineer role where I can contribute across the organisation's systems — requirements analysis, databases and information systems, internal and web applications, ERP, system integration and process automation. Framework- and domain-agnostic by training, I adapt quickly to whichever area the role requires.

## TECHNICAL SKILLS

- **Software Engineering:** Requirements analysis, object-oriented design, data structures and algorithms, relational and document data modelling, REST API design, system integration.
- **Databases:** Oracle, PostgreSQL, MySQL, MongoDB.
- **ERP / Odoo:** Self-taught through a training project: custom modules in Python, XML/QWeb views and reports, module configuration.
- **Backend:** Node.js, Express.js, Django REST Framework, Parse Server, REST APIs, authentication and role-based permissions, WebSockets and real-time communication.
- **Frontend:** React, Angular, Vue, Vite, Tailwind CSS, Material UI, responsive and component-based interfaces, state management, Arabic RTL support.
- **Platforms & Tools:** Linux servers and application deployment, Git.

## Education

### Damascus University

Bachelor of Information Technology Engineering  
Specialised in Software Engineering and  
Information Systems.

2020 – 2026

### Syrian Virtual University (SVU)

Bachelor of Science in Management  
Specialised in Human Resources.

2024 – Present

## Skills

- Problem-solving
- Attention to detail
- Adaptability and flexibility
- Time Management
- Presentation Skills
- Networking
- teamwork and leadership

## Language

- Arabic (mother tongue)
- English (fluent)

## Professional Experience

2026

Present

### 90soft

#### Software Engineer & Technical Recruiter

- Building Code Your Future, a platform that evaluates candidates by real tasks instead of CV keywords — full-stack with Angular and Parse Server: cloud functions, data classes, queries, authentication and role-based permissions.
- Scope roles with team leads, write job descriptions, technically screen engineers, and run interview loops through offer and onboarding.

2024

Present

### Freelance Software Engineer

#### Full-Stack Developer

- Delivered frontend and full-stack web features for clients.

2023

2023

### Goma plus

#### Frontend Developer

- Developed modern web applications with the React.js library, using Material UI and Tailwind CSS.
- Maintained existing web applications and improved their performance and user experience.

## PROJECTS

### Darb — Public Transit Information System | Graduation Project

In cooperation with Zajil Transport Company

GTFS / GTFS-RT standard | Real-time data | React

- A GTFS / GTFS-RT compliant transit information system for Damascus, built to an international data standard: routes, schedules, stops, trip monitoring and real-time vehicle tracking.
- Built the operator-facing side — dashboards, tables, maps and management workflows — and integrated every screen with the backend APIs, handling state, loading and error feedback.
- currently being prepared for a live public launch.
